Sign and Grade	

AIM : To design a Flask application that showcases URL building and demonstrates the use of HTTP methods (GET and POST) for handling user input and processing data.

DESCRIPTION : This Flask application includes a homepage with links to a "Profile" page and a "Submit" page. The "Profile" page dynamically displays a user's name based on the URL parameter, while the "Submit" page contains a form that collects a user's name and age via POST method, displaying a confirmation message with the provided data.

OUTPUT :

Github link : https://github.com/Anushka3204/Exp_4_WebX_flask

Conclusion : The Flask application successfully demonstrates URL building, dynamic routes, and handling user input using GET and POST methods, providing a practical example of web development concepts.
